PROFESSIONAL SUMMARY

Results-driven Java Software Engineer with 5+ years of experience building scalable backend systems using Java, Spring Boot, and microservices, currently a Digital Engineering Analyst (Officer) at Citi Bank. Skilled in Python, ETL pipeline development, and integrating Generative AI and LLMs into enterprise applications. Strong foundation in RESTful API development, system design, and Agile delivery.

TECHNICAL SKILLS

Programming Languages: Java, Python3.
Frameworks & Libraries: Spring Boot, Spring MVC, Microservices.
Generative AI & LLMs: OpenAI API, Google Gemini API, LLM Integration, Prompt Engineering.
Databases: Oracle, PostgreSQL, MySQL.
AI Tools & Platforms: Github Co-Pilot and Devin AI.
Cloud & DevOps: Docker, Kubernetes, Git, CI/CD.

PROFESSIONAL EXPERIENCE

Officer – Digital Engineering Analyst November 2026 – Present
Citi Bank, Pune, India

Specialist Programmer L2 August 2021 – November 2026
Infosys Limited, Pune, India

KEY PROJECTS

IMS – Centralised AI-Powered Investigations Management System Nov 2025 – Nov 2026
Infosys Limited, Pune

- Built RESTful APIs using Spring Boot with layered architecture (Controller, Service, Repository), incorporating exception handling, request validation.
- Leveraged Spring Boot features – auto-configuration, dependency injection, and Spring Data JPA – to maintain clean, testable, and maintainable Java codebases.
- Designed a dynamic schema-driven API framework where UI components render based on API and database configuration, eliminating frontend code changes and reducing deployment cycles.
- Integrated Flowable workflow engine to orchestrate the full investigation lifecycle from intake through closure.
- Owned end-to-end database design: schema modelling, table relationships, indexing strategies, and query optimisation for high-read API workloads.
- Architected an end-to-end Generative AI solution processing emails, Word documents, and PDFs – extracting entities, allegations, and narratives to auto-create structured cases.
- Implemented Factory Design Pattern for dynamic runtime switching between OpenAI and Google Gemini LLM providers, ensuring vendor flexibility and zero-downtime upgrades.
- Delivered advanced AI features: document translation, AI-generated case summaries, investigation plan creation, duplicate case detection, and semantic search.

TalendExit – Legacy ETL Modernisation & Data Pipeline Framework Sep – Oct 2025
Infosys Limited, Pune

- Built TalendExit, a Python-based ETL framework to fully replace the Talend platform, eliminating licensing costs and modernising legacy data infrastructure.
- Engineered a JSON-driven pipeline orchestration engine with dynamic runtime configuration, enabling non-developer teams to manage pipeline execution without code changes.
- Leveraged Dask for distributed parallel computing, achieving significant performance gains in large-scale data processing.
- Successfully migrated 1,200+ production ETL jobs, reducing technical debt and eliminating legacy platform dependencies.

OneInsight – Regulatory Reporting Platform August 2021 – August 2025
Infosys Limited, Pune

- Developed 50+ RESTful APIs using Java and Spring Boot for data ingestion, transformation, validation, and automated regulatory report generation.
- Built high-performance scheduled batch jobs for large-scale rule execution across millions of records, ensuring accurate and timely regulatory submissions.
- Designed a custom DSL grammar engine using JavaCC, enabling dynamic business rule parsing and execution across diverse reporting workflows.
- Developed key regulatory features: Topside Adjustments, Supplementary Data Upload, and end-to-end Report Generation pipelines covering aggregation, rule execution, and submission-ready output.
- Debugged and resolved critical production incidents – data processing failures, incorrect regulatory calculations, and batch job breakdowns – ensuring data integrity across live reporting cycles.
- Applied Factory and Singleton design patterns; led solution architecture defining microservices boundaries and data flow over a 4-year engagement.

EDUCATION

Bachelor of Engineering (B.E.) 2021
Walchand Institute of Technology, Solapur, Maharashtra | CGPA: 9.8 / 10.0
